

Installing Control-M Enterprise Manager V9.21 on Client PC

Step 1:

Navigate to the below link to download the GA_Installer file

[Download Control-M GA Installer](#)

OR

[Alternative Control-M GA Installer Download](#)

NB: Please ensure the "GA_Installer.exe" file is saved to your local desktop.

Step 2:

Ensure that you have the latest valid version of java on your PC (Version 24 or 11.0.24 and higher). You can confirm your java version via Command Prompt or Windows PowerShell by running the command "**java -version**".

Command should return output like below with the version number:

```
openjdk version "11.0.24" 2024-07-16 LTS
OpenJDK Runtime Environment (Red_Hat-11.0.24.0+8-1) (build 11.0.24+8-LTS)
OpenJDK 64-Bit Server VM (Red_Hat-11.0.24.0+8-1) (build 11.0.24+8-LTS, mixed mode)
```

If you receive an error for "java not recognized" then you either do not have java installed or the path to java is not properly defined in your system environmental variables.

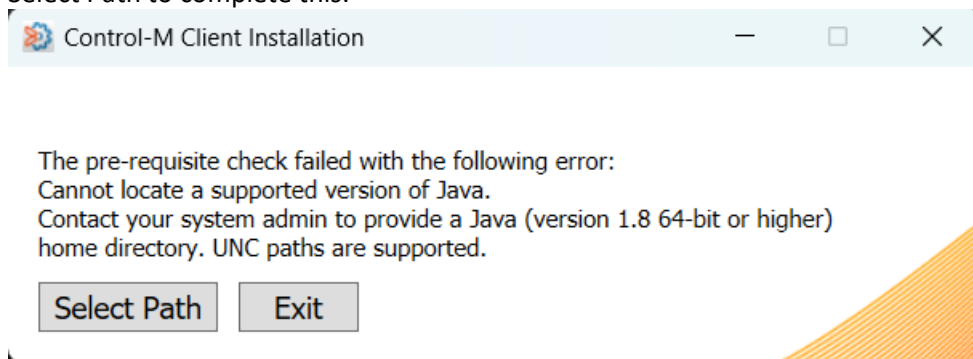

You can download the latest valid version of java by going to the below links:

[Java Standalone ZIP folder](#) – Save and extract zip file to a location you will remember. If the extracted folder has a long name such as "java-11-openjdk-11.0.24.0.8-1.windows.redhat.x86_64", please rename the folder to JAVA as the installer sometimes fails if the path to java is too many character.

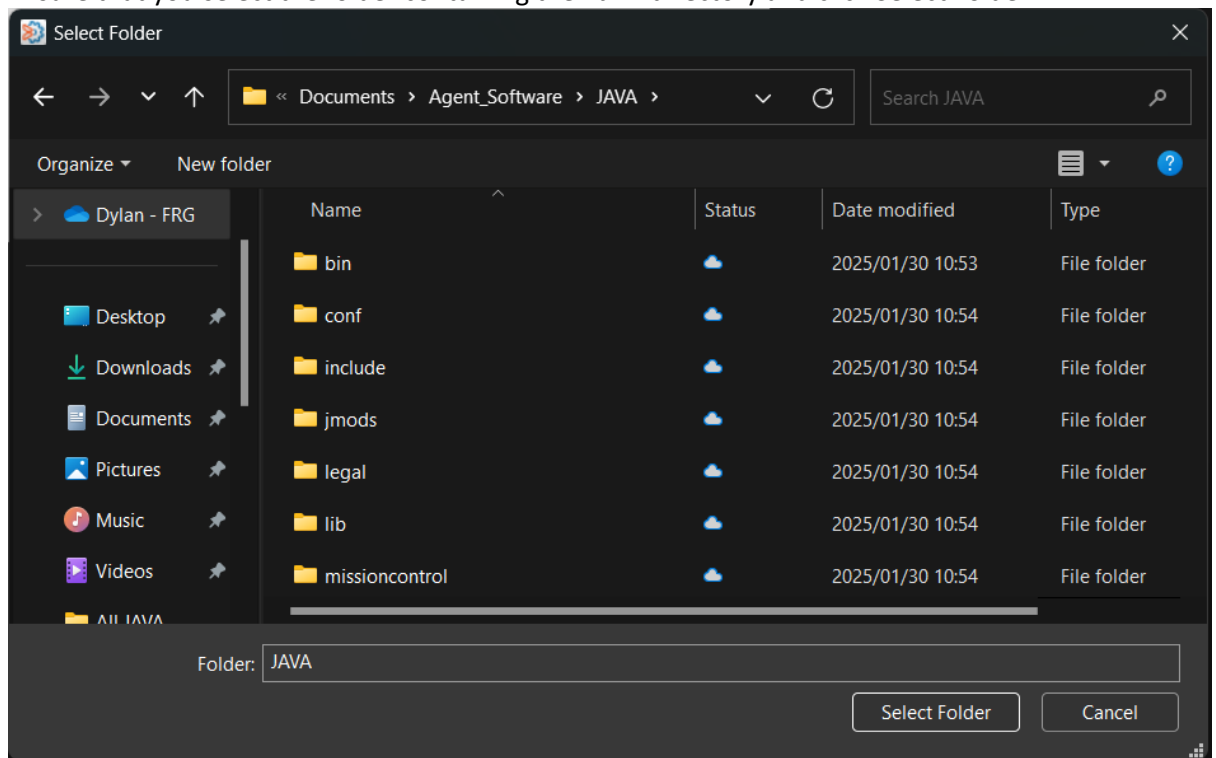

[Java exe installer](#) – Run the downloaded exe installer and confirm if java version is recognised by running command mentioned at the start of Step 2.

Step 3:

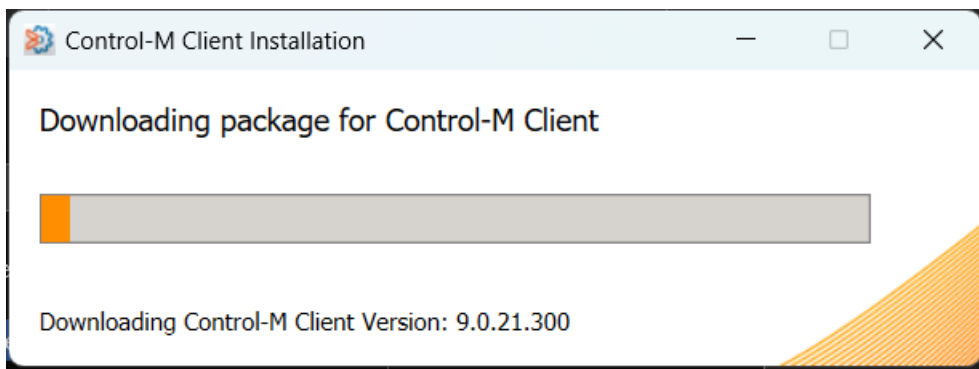

- Run the downloaded installer “GA_Installer.exe” file as local user. You should not need admin rights to perform the install.
- If your Java path is not properly defined, or you are making use of the standalone java zip download files then the install will require you to select the path to your java folder. Click Select Path to complete this:

Ensure that you select the folder containing the “bin” directory and click Select Folder:

If the path you have selected is correct, the installer should begin downloading the installation package. Please ensure you have a stable network connection for this step:

- Once the installer launches, accept the terms of the licence agreement and click next.

Step 4:

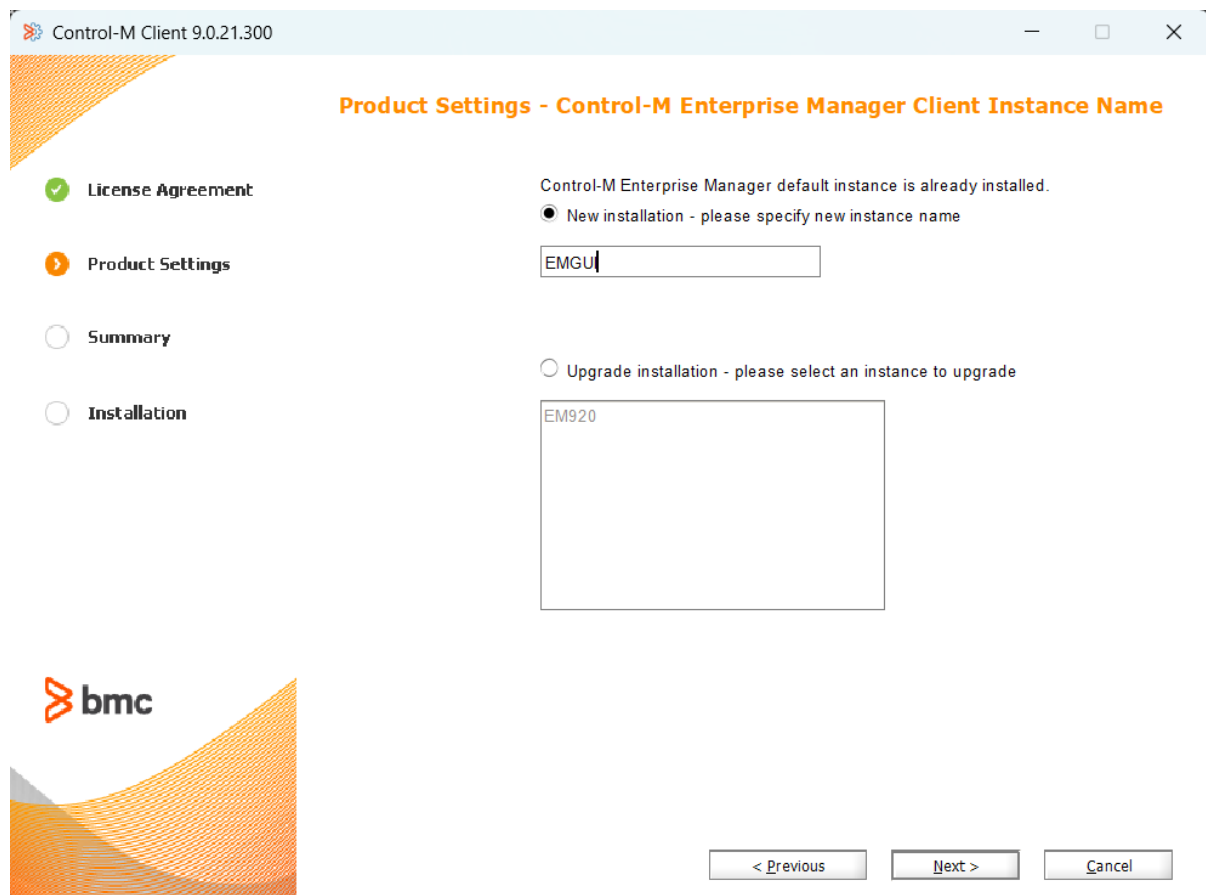

Your next window will be: Product Settings - Control-M/Enterprise Manager Instance Name.

If you are installing a fresh install of Control-M EM GUI Client then follow the steps below.

If you are upgrading from the previous version to the latest version, please go to [Step 7](#).

New Installation:

Select New installation and specify a name (For example EMGUI)

Click Next.

Step 5:

Your next window will be: Product Settings - **Control-M Client 9.0.21.x**

Please enter in the Web Server hostname and port:

Web server hostname: **wla-emprod**

Web server port number: **18080**

Control-M Client 9.0.21.300

Product Settings - Control-M Client 9.0.21.300

☒ License Agreement

☒ **Product Settings**

☐ Summary

☐ Installation

Installation path: C:\Users\vf4845730\BMC Software Browse...

Web server configuration:

Web server hostname: wla-emprod Test...

Machine on which Control-M Enterprise Manager is installed.

Web Server port number: 18080
Determines the existing port number that communicates with the web service.

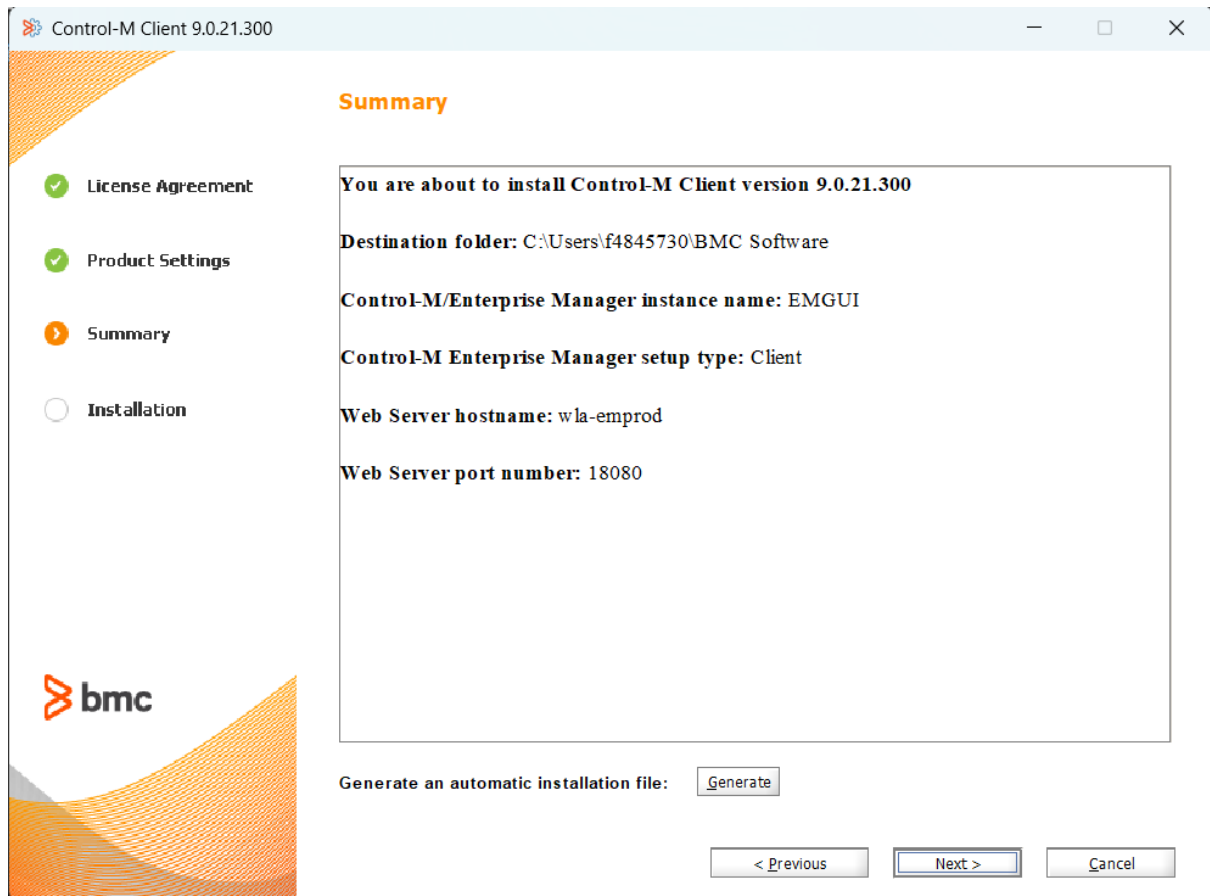

< Previous Next > Cancel

Click Next.

Step 6:

Summary screen appears: (Confirm if the details are correct)

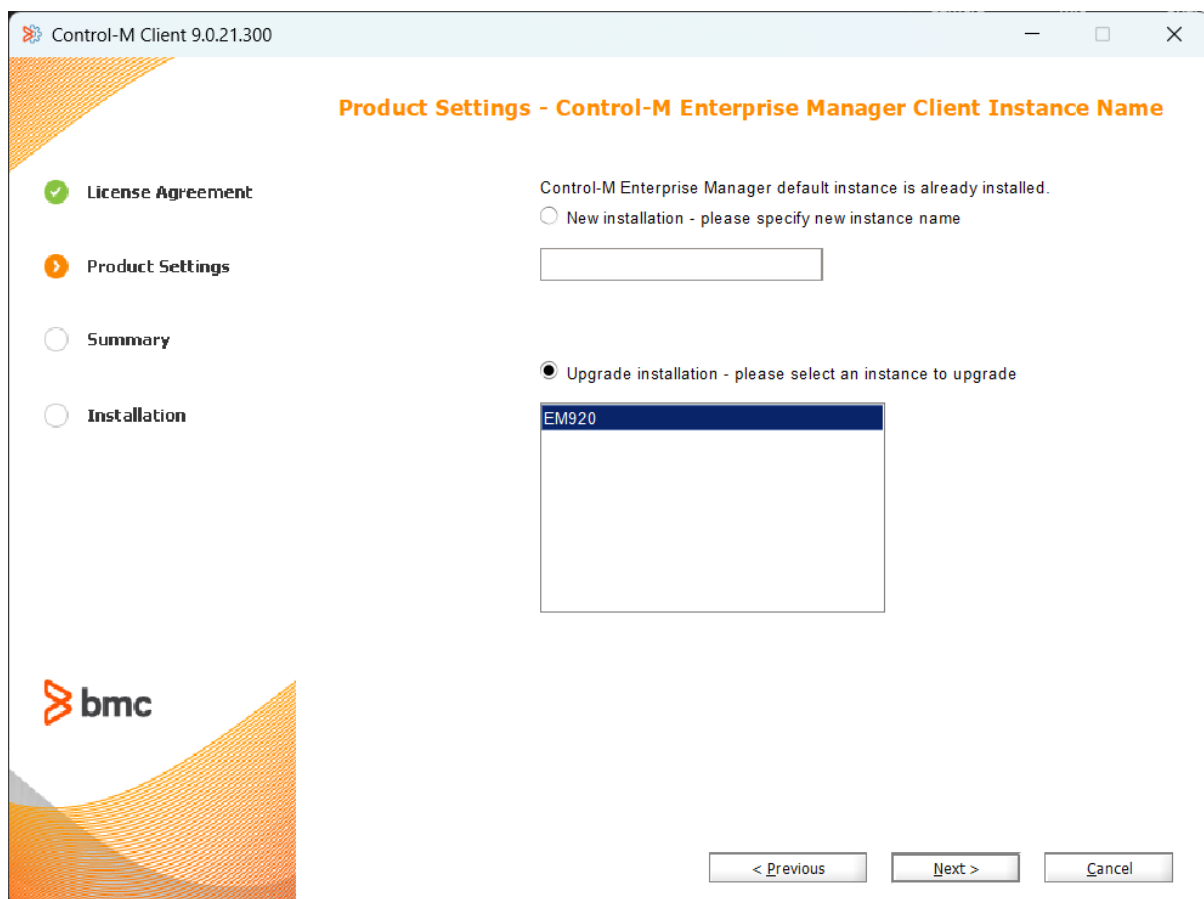

Click **Next** and wait for the installation to complete. This can take a while. Once installation is completed, proceed to [Step 10](#).

Step 7:

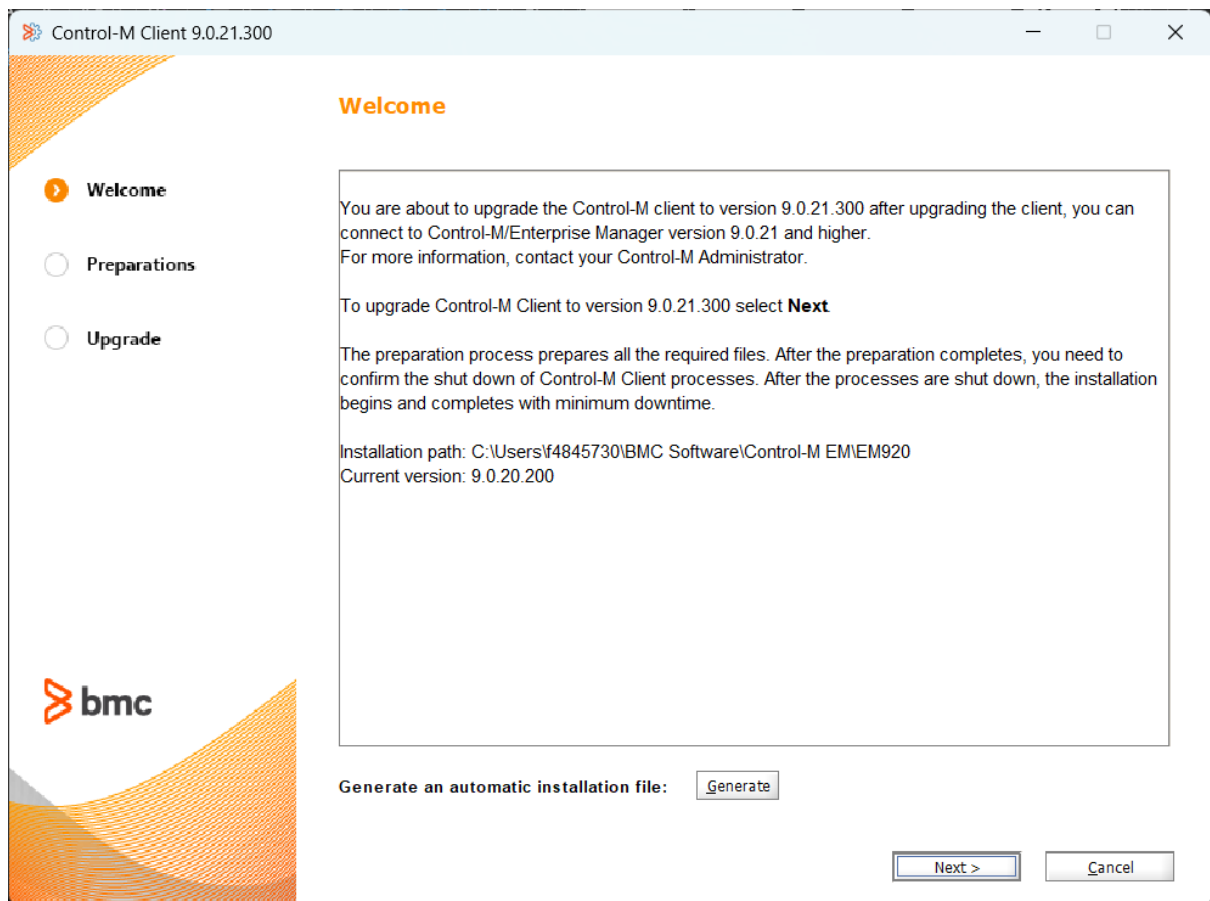

Upgrade of existing installation:

Select Upgrade installation and select the name of the existing installation that you would like to upgrade then click Next:

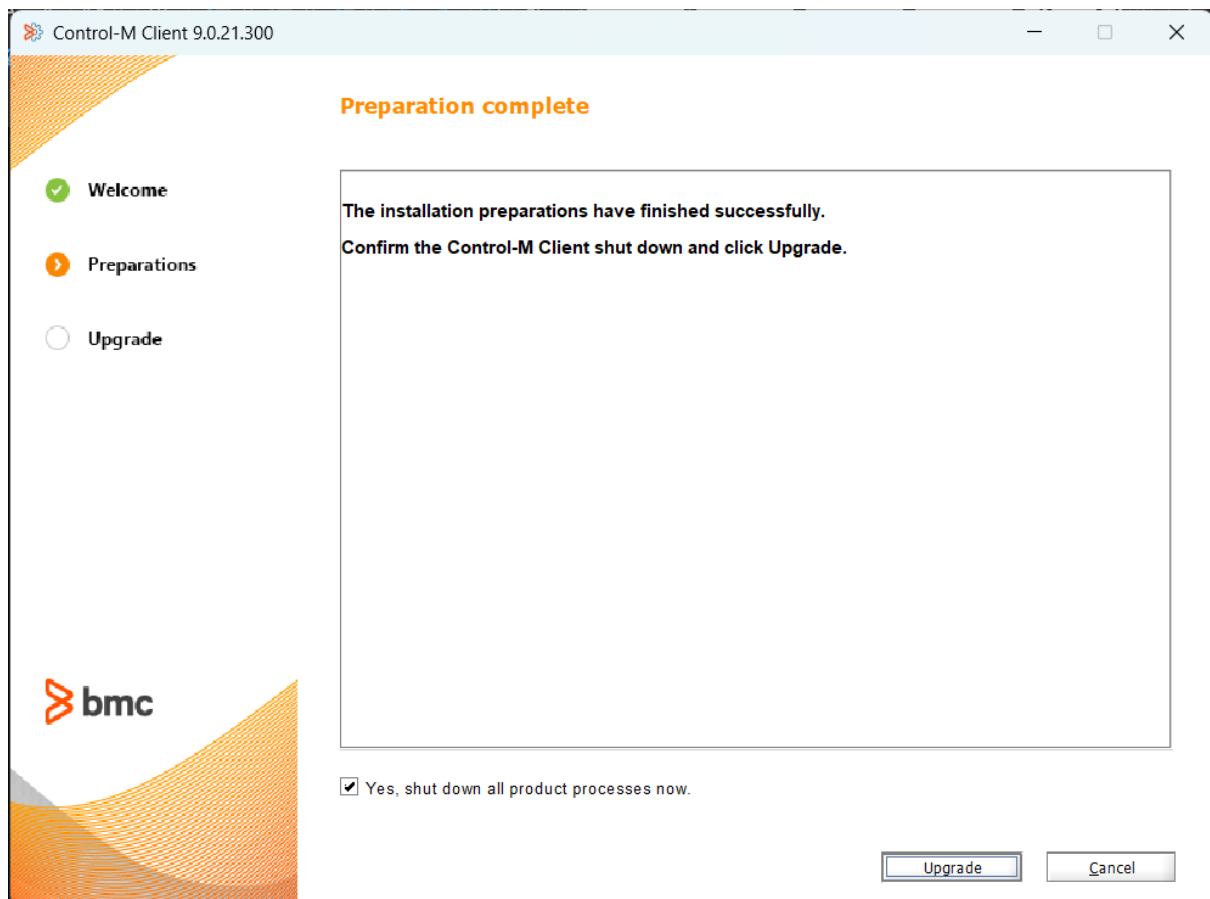

Step 8:

The following screen will display the version you are currently on as well as the version you are upgrading to. Confirm that the upgrade version is correct (9.0.21.x) and click Next to continue the installation process.

Step 9:

The installer will prepare the installation. Once complete click the checkbox to shut down all product processes and then click Upgrade to begin the upgrade process. This may take a while.

Step 10:

To open the Control-M GUI Client Look for this icon below on your desktop or navigate to **Start -> All Programs -> BMC Control-M -> Control-M EMGUI** (Name will differ based on the name provided when first installed as in [Step 4](#)).

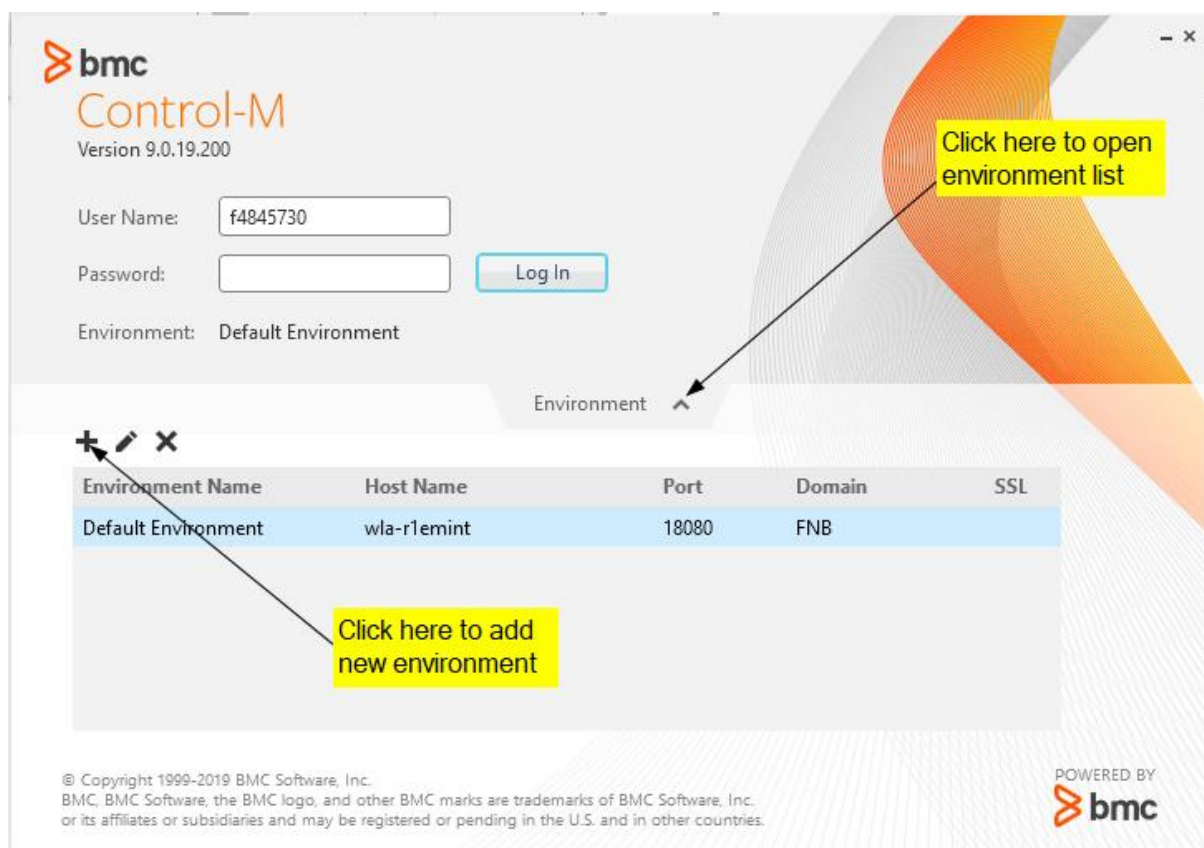

Creating the Environment Connection Profiles (INT, QA & PROD).

This procedure can only work after you have successfully installed the Workload Automation Client (921) on your workstation.

- Navigate to the **Workload Automation Client** icon on your workstation.

- Double click the icon to open the application.
- Click on Environment drop-down.
- Click on the “+” sign to add a new Profile.

- Add in the following details below.

NB: The below is procedure is to configure and access the **PROD** Control-M environment

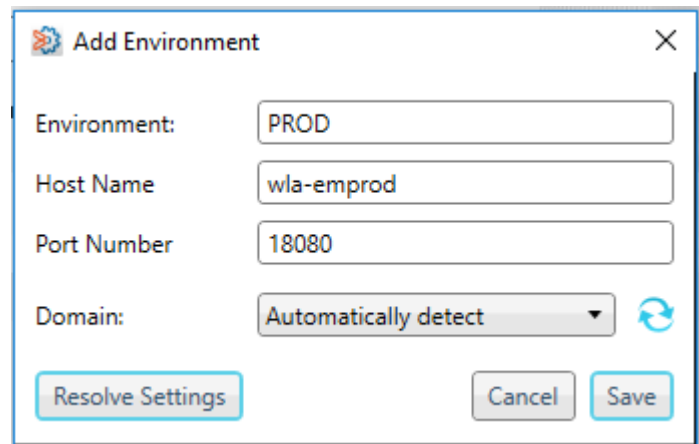

Environment: **PROD**

Host: **wla-emprod**

Port: **18080**

Domain: <Select your relevant AD Domain>

NB: If only Automatically Detect and Local EM are shown then please click the refresh icon.

The screenshot shows the 'Add Environment' dialog box with the following fields: Environment: PROD, Host Name: wla-emprod, Port Number: 18080, and Domain: Automatically detect. There is a refresh icon to the right of the Domain dropdown. At the bottom, there are three buttons: 'Resolve Settings', 'Cancel', and 'Save'.

NB: The below is procedure is to configure and access the **QA** Control-M environment

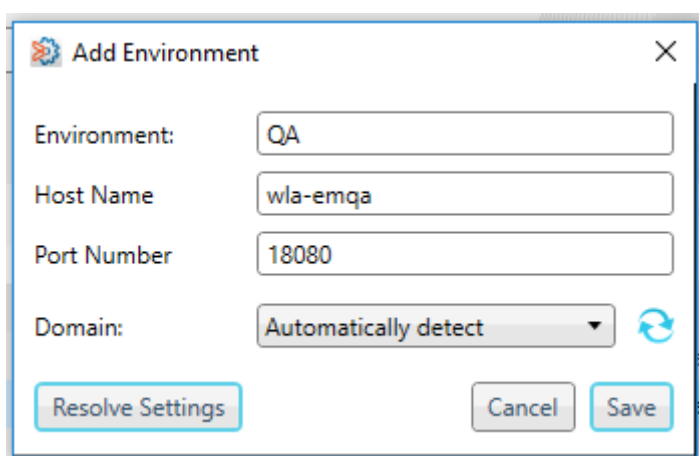

Environment: **QA**

Host: **wla-emqa**

Port: **18080**

Domain: <Select your relevant AD Domain>

NB: If only Automatically Detect and Local EM are shown then please click the refresh icon.

The screenshot shows the 'Add Environment' dialog box with the following fields: Environment: QA, Host Name: wla-emqa, Port Number: 18080, and Domain: Automatically detect. There is a refresh icon to the right of the Domain dropdown. At the bottom, there are three buttons: 'Resolve Settings', 'Cancel', and 'Save'.

NB: The below procedure is to configure and access the **INT** Control-M environment

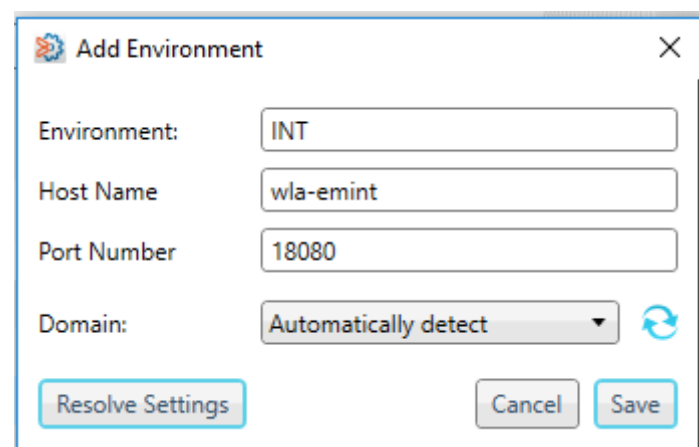

Environment: **INT**

Host: **wla-emint**

Port: **18080**

Domain: <Select your relevant AD Domain>

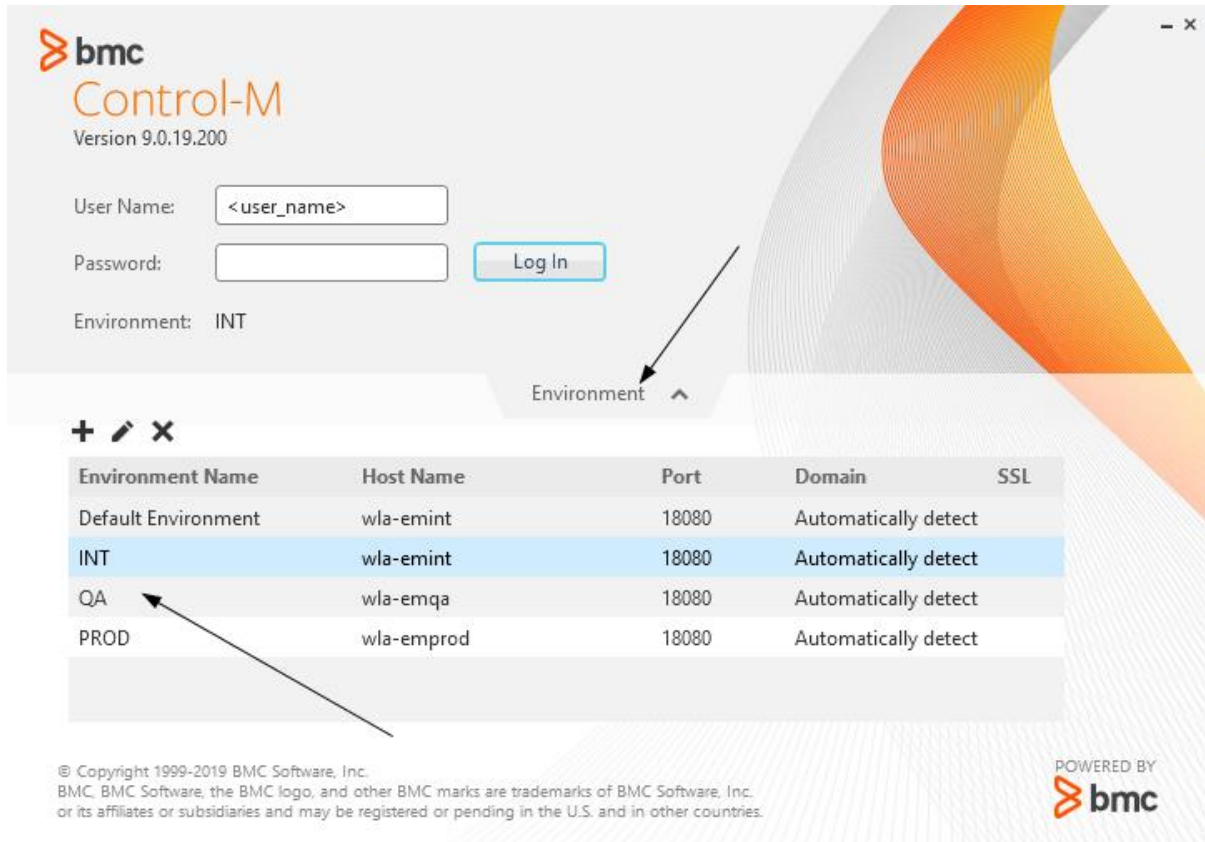

NB: If only Automatically Detect and Local EM are shown then please click the refresh icon.

The screenshot shows the 'Add Environment' dialog box with the following fields: Environment: INT, Host Name: wla-emint, Port Number: 18080, and Domain: Automatically detect. There is a refresh icon to the right of the Domain dropdown. At the bottom, there are three buttons: 'Resolve Settings', 'Cancel', and 'Save'.

After saving the configuration details:

- Click the Environment drop-down.
- Select the environment you wish to use from your saved configurations.
- Enter your “**User name**” as you currently login with.
- Enter your Domain “**Password**” and click on “**Log In**”.

The screenshot shows the BMC Control-M login page. At the top left is the BMC logo and 'Control-M Version 9.0.19.200'. Below this are input fields for 'User Name' (containing '<user_name>'), 'Password', and a 'Log In' button. An 'Environment' dropdown menu is set to 'INT'. Below the dropdown is a table of environments. An arrow points from the 'Log In' button to the 'Environment' dropdown, and another arrow points from the 'QA' row of the table to the 'Log In' button. At the bottom left is copyright information, and at the bottom right is the 'POWERED BY bmc' logo.

Environment Name	Host Name	Port	Domain	SSL
Default Environment	wla-emint	18080	Automatically detect	
INT	wla-emint	18080	Automatically detect	
QA	wla-emqa	18080	Automatically detect	
PROD	wla-emprod	18080	Automatically detect
